

Wednesday Challenge Form

Group Members: Raul's team

Problem Statement: Use a series of half-pipes to pass a marble from person to person each equipped with their own half-pipe and eventually into a brown bag.

Approach: Well, first we just attempted to pass the marble as fast as we could. Then, we eventually realized the best way to do it is to do it as slow as possible because mistakes were practically guaranteed once the marble was going too fast.

Solution: We decided to start going very slow while passing the marble from person to person and lined up straight.

Lessons Learned: If I were to do this again I would've started out by going slow and being lined up perfectly.
